### ORE SHIPMENTS.

Ore shipments for the period from June 1 to 7, inclusive, were as follows:

From Tonopah—Tonopah Mining Company, 3,466 tons to Desert Power and Milling Company at Millers; Tonopah-Belmont Development Company, 809 tons to Belmont mill at Millers; Jim Butler, 72 tons to the Belmont mill at Millers; MacNamara, 153 tons to Belmont mill at Millers; Midway, 106 tons to the Belmont mill at Millers; Tonopah Extension, 44 tons to the Western Ore Purchasing Company at Millers. Total from Tonopah, 4,650.

From Goldfield—Anglo-California bank, 352 tons to Peyton Chemical Company, Peyton, Cal.; G. F. Wingfield lease, 92 tons to the Western Ore Purchasing Co., at Millers; Western Ore Purchasing Company, 447 tons to the Western Ore Purchasing Company at Millers; Western Ore Purchasing Company, 640 tons to the Western Ore Purchasing Company at Lewis; Anglo-California bank, 16 tons to the Selby Smelter Company, Vallejo Junction. Total from Goldfield, 1,577 tons.

Grand total, including shipments from Tonopah and Goldfield, 6,227 tons.

## TEN INCH STRIKE OF \$5,000 ORE

One of the biggest things which has happened in the Bullfrog district in a mighty long while is a strike made recently on the Tramp Consolidated. In a raise which is being carried from the 350-foot level at the Denver claim to the working level above of ore which will easily run \$5,000 to the ton was broken into. Superintendent Garden brought a chunk of it, weighing five to six pounds, up town, and stopped at the Miner office as he went along. Some very rich ore has been taken from the Tramp. The gold was scattered all over it, and did not appear to be in seams or crevices, but continuous throughout the mass.

In the face of the raise there are two stringers of about ten and eight inches respectively, and each contains ore of exceeding richness. Connection will be completed between the 350-foot level and the working above which is known as Tunnel No. 4, in a few days, when stoping on the rich body will be started.

The entire vein is an excellent quality of mill rock, and the streaks are shipping ore of a high grade. At present Superintendent Garden is throwing everything on the dump, but when connection between the two levels is made, and he starts stoping, he will sack the rock for shipment. The dump can be sorted and a good quantity of shipping picked out. The fact of the matter is that if one is in search of specimen ore, he does not have to look long before he lights on stuff which fairly glitters with free gold.

In the same locality, some time back, when W. D. Blackmer had charge of the property, a couple of carloads of ore were extracted and shipped. These returned \$123 to the ton, but the ore was not to be compared in richness with the present strike. Much specimen ore has been covered on the tramp estate, but nothing before which equaled this. A departure in the present instance is the fact that outside of the greater richness the ore appears in more generous amounts. The two stringers are both highgrade, and practically their entire contents are shipping.

In addition to the work being continued in this working, Superintendent Garden is continuing development in the tramp tunnel and the collapse—Bullfrog Miner.

menia, still continues. This situation arises from a boundary dispute and question of sovereignty.

## TIPTOP'S LATEST FIND IS GREAT

Surface ore, brought in yesterday from Tiptop camp, Humboldt County, by W. R. Grant, showed an assay test values of \$184 to the ton in gold. Grant said this was a fair average of a vein four feet wide, just discovered, and which he believes is the biggest strike made in the district since the excitement started there about six weeks ago, over finding of sensational values in the porphyries.

Grant has been at Tiptop for five weeks, and reached Reno loaded with bags of high-grade ore and enthusiasm regarding the camp. He displayed outcroppings from the ledges that are literally peppered with the yellow metal. These picture samples, he explained, however, formed no part of the ore that was tested, which is quartz-porphry shot with hematite cubes, that are heavy bearers of values. He said this ore body is about two miles north of the camp, and that another big strike has been made just over the hill, on the east side of the range, in similar formation. A third strike was also reported in the same vicinity. Near by are the old Dun Glen, Lang Syne and other mines which years ago were famous producers.

"Last week was the biggest Tiptop has ever had in the way of strikes," Mr. Grant said, and it is a fact that wherever the prospectors get into the black porphyries they are finding the values. The quartz, of which there is plenty there, carries gold, but is not so fertile as the porphyries. When the mines were operated years ago the work done was done in the quartz seams; there was no deep mining done, and, nevertheless, there are properties there that produced over \$1,000,000. Had the owners not kept away from but worked in the lime contacts and the porphyry those mines might have been producing millions annually throughout the period of their idleness.

"The district is now coming into its own through knowledge of the formations carrying greatest values."

Internal Revenue Collector Harry J. Humphries, who has been an interested reader of the news from Tiptop, yesterday said:

"I am not surprised that a number of rich discoveries of gold ore have recently been made in the new district of Tiptop. I was interested in mining in Humboldt County a number of years, and am therefore quite familiar with particular district, especially in and around Dun Glen and Barber Canyon, both of which I understand are close to the new strike.

northeast and southwest from the Old Lang Syne mine across Dun Glen, Tiptop, and on to Spring Valley, below Unionville, where it is estimated

the Chinese have taken out over \$6,000,000 in placer mining.

"The Lang Syne, which is but a short distance from Tiptop, has a record of producing something over \$3,000,000 in gold. It was at one time under the supervision of John Ross, one of the most competent mining men on the Coast. He was recently superintendent of some of the big Comstock mines.

"The Chinese have also been placer mining in Barber and Rockville canyons steadily for over 30 years.

"I have no doubt but that the new camp at Tiptop will 'make good.' It is certainly one of the most favorably situated in the State. The facilities for economical mining and milling operations are also favorable, there being water and scrub timber in canyons nearby."—Reno Journal.

### ECCENTRICITIES OF GENIUS.

"Genius is freakish. It is claimed that the brilliant Dr. Johnson used to touch every post in his pathway."

"I know one of them geniuses."

"And does he touch every post he comes across?"

"No; he touches every friend he comes across, or everlastingly trips to."—Louisville Courier-Journal.
